Point of Contact:

COST: \$100,313.36

The WWRF uses a grinder and auger to breakdown and separate large solids from the incoming wastewater stream. The auger assembly has been in service since 2001 and has reached the end of its life cycle due to wear on the auger and casing. This unit is critical to the operation of the WWRF by removing rags and other large inorganic solids from the wastewater stream that plug and foul downstream processes and equipment. JWC Environmental is the manufacturer of this equipment and no other vendors can supply a drop in interchange unit.
