The WWRF Facility includes twenty (20) miles of Effluent Water Pipeline to convey effluent water to various points of diversion for beneficial reuse. These pipelines include numerous valves ( with tubes attached from valve to grade) for the isolation of the pipelines, air reliefs, and fire hydrants located on these pipelines. Part of pipeline maintenance is to maintain the valves by exercising them and cleaning out the rise tubes to allow quick access to the valve operator attachment point. Proper maintenance of the pipeline valves allows quick isolation in the event of a leak to help conserve water and protect public health. EH Wachs Utility products is the manufacturer of this equipment and uses a Regional Distribution through Direct Regional Account Managers or Exclusive Dealers. We have no exclusive dealers in this region and any vendor supplying this equipment must go through the Direct Regional Account Manager.
